- Rapid response to rising flood waters or internal flooding
- Combat flash flooding by deploying a wall of FloodSax in minutes
- One sandless bag will absorb 22 litres of water!

FloodSax - available for purchase online at www.floodsax.com.au

BUSINESS AS USUAL DURING FLASH FLOODING

"It can come up very, very quickly. There is not a lot of warning. Now we've got the Floodsax we are managing to hold the flood away. Everything is dry in here. It will save us a lot of money."

Lyn Dare, Co Gri Group Ltd

With the increase in extreme weather events right across the country, quotes such as this from business owners dealing with flash flooding and water damage have become a common occurrence.

The emergency services sector, as well as the insurance industry, recommends that organisations implement annual risk management strategies which include disaster planning and preparation. Andrew Gissing, Director of Emergency Management and Communications at the State Emergency Services (SES) states, "the SES encourages all businesses to consider their readiness for floods and storms, including developing an emergency plan to deal with their effects".

So what are FloodSax and how can they help to protect your business? FloodSax are sandless flood bags that are lightweight and easy to deploy. Their super absorbency enables you to place a bag underneath a leaking ceiling or faulty sprinkler system and can be used to form a wall or even build a 'box' to confine or direct water flow. FloodSax are also 100% biodegradable and all profits are reinvested back into local communities through the Brotherhood of St Laurence.

Jeff Moon, the General Manager of Social Enterprises at the Brotherhood of St Laurence says, "we have chosen FloodSax as a flood mitigation tool because they empower all Australians to protect their home, business and community against flooding and accidental water damage".

A wall of FloodSax can be deployed in minutes, meaning this is one of the fastest flood mitigation tools on the market. If your business could be at risk from floods or water damage, then FloodSax should be an integral part of your disaster management plan.
