

# FloodSax

Interim Flood Commission findings\* call for immediate action before the next wet season to:

- ☐ promote share responsibility, encourage and foster self reliance towards household preparedness
- ☐ provide equitable opportunities for our most vulnerable in the community including the ill, elderly and disabled
- ☐ develop solutions to minimise the strain on emergency management resources in times of flood
- ☐ address the inadequacy of access to sandbags and the lack of knowledge about the filling and use of sandbags
- ☐ develop measures to deal with the inability of drains to cope with extreme weather events leading to urban flash flooding
- ☐ provide immediate flood prevention methods for not only households but other valuable infrastructure and assets.

FloodSax are a lightweight, portable alternative to sandbags that expand on contact with water. Be proactive where immediate action is required, floodsax can be distributed and deployed within minutes. FloodSax provide a quick labour free solution for unpredicted extreme weather events and for those residents unable to negotiate the task of filling, collecting and managing traditional sand bags.

Take measures to ensure your residents are as prepared as they can be this wet season.
